SUMMARY

Results-driven Full-Stack Software Engineer with 7+ years of experience building scalable, high-performance web applications across enterprise, fintech, and edtech domains. Expertise in Angular, Node.js, and modern JavaScript ecosystems, with strong focus on system optimization, migrations, and user experience enhancement. Proven ability to lead complex implementations, improve platform performance, and deliver secure, production-grade solutions.

EXPERIENCE

Unified Infotech

Remote, India

Senior Software Engineer

Jun 2024 - Mar 2026

- Led end-to-end frontend modernization and feature engineering across multiple enterprise platforms, improving performance, scalability, and maintainability using Angular, RxJS, and NgRx.
- Enhanced accessibility compliance and user experience in McGraw Hill's Boards and Beyond platform by implementing narrator support and accessibility features aligned with standards.
- Enabled data-driven product decisions by integrating Pendo analytics into the Learners application, capturing user behavior insights for feature optimization.
- Spearheaded migration of CKEditor4 to CKEditor5, including development of a custom S3-integrated file manager, eliminating dependency on third-party paid solutions.
- Architected and stabilized complex enterprise workflows (job, order, quote) in CQFluency, resolving pricing inconsistencies, multi-currency issues, and CAT tool integrations.
- Strengthened platform security by implementing robust RBAC, secure impersonation flows, and improved session handling across enterprise systems.
- Optimized real-time user engagement systems by implementing Firebase push notifications and improving feed reliability, reducing interaction failures and latency issues.

ITC INFOTECH

Remote, India

Associate IT Consultant

Mar 2022 - Mar 2024

- Scaled and optimized the hotel booking engine, improving performance and handling increased transaction volumes across global users.
- Enhanced location intelligence by integrating Google Places API, enabling accurate search and improved user navigation experience.
- Developed advanced search and trip management features, including client-side trip cancellation workflows, improving user control and flexibility.
- Strengthened application architecture by implementing authentication flows, route guards, resolvers, and HTTP interceptors for secure and efficient data handling.
- Led internationalization (i18n) implementation, enabling multi-language and multi-currency support for global market expansion.

TATA Consultancy Services

Kolkata, India

Systems Engineer

Mar 2018 - Mar 2022

- Delivered scalable, cross-browser enterprise applications for financial clients including Old Mutual and Citi Bank, ensuring high reliability and performance.
- Modernized legacy systems by migrating applications from Angular 4 to Angular 8 and from JavaScript/Adobe Flex to Angular frameworks.

- Improved application performance through code optimization and tree-shaking techniques, reducing bundle size and load times.
- Migrated enterprise profiling systems from XML-based architecture to Angular 12, enhancing maintainability and scalability.
- Mentored junior developers and supported onboarding, improving team productivity and code quality standards.

EDUCATION

Bachelor's Degree in Electronics And Instrumentation • GPA: 7.65	Jan 2013 - Dec 2017
West Bengal University of Technology	Kolkata, India
High School Diploma in Computer Science, Physics, Chemistry, Mathematics • GPA: 76.6	Jan 2011 - Dec 2013
Barasat P.C.S. Govt. High School	Kolkata, India

SKILLS

Front-end Development: Angular, TypeScript, JavaScript, NgRx, RxJS, HTML, CSS, Tailwind CSS, Threejs

Back-end Development: Node.js, Express.js, REST APIs, MongoDB

Cloud and Deployment: Amazon S3, Cloudflare R2, Vercel, Render, InterServer VPS, CI/CD Pipelines, Nginx, Linux

Software Engineering Practices: Git, GitHub, Webpack, Custom Plugin Development, Code Refactoring, Cross-browser Compatibility

Project Management and Optimization: Performance Optimization, Accessibility Features, User Experience Enhancement, Data-driven Decision Making, Security Checks

PROJECTS

Presmistique – AI Resume Builder (Full-Stack Platform)

Built and deployed a full-stack resume builder platform enabling AI-powered resume parsing, ATS scoring, and content enhancement using Google Gemini. Designed scalable backend and CI/CD pipelines using Cloudflare Pages, Vercel, and VPS infrastructure, ensuring high availability and production stability. Integrated Puppeteer-based PDF generation and real-time resume optimization workflows, improving user experience and automation capabilities.

Technologies: React, Node.js, MongoDB, Tailwind, REST APIs, Gemini AI, CI/CD, Nginx, Linux

Custom CKEditor5 with File Manager Integration

Developed a custom CKEditor5 build with proprietary file management integrated with AWS S3 and Cloudflare R2. Eliminated dependency on CKFinder/CKBox, significantly reducing operational costs and improving control over asset management.

Technologies: JavaScript, CKEditor5, Webpack, AWS S3, Cloudflare R2
